Precision Laboratories Announces Radius™ Soil Surfactant

Northbrook, IL, February 12, 2003 -- Rick Wohlner, president, Precision Laboratories today announced the introduction of Radius, a unique, new soil surfactant designed to manage water in both constructed and native soil profiles. Its intended use is for turf managers that want to control their turf in a predictable fashion in shorter application time intervals.

Containing ingredients that optimize water conservation, Radius influences even water penetration into the root zone. Radius also prevents and treats soil hydrophobicity and LDS. The formulation and application interval offers predictable performance throughout the growing season and is applied at rates of 8 ounces per 1000 ft², every 60 to 90 days or 4 ounces per 1000 ft² as a monthly treatment .

Radius is available in liquid form, with a planned release of a granular product in the summer of 2003.

Radius is available from Precision Laboratories' nationwide network of independent turf distributors. For more information, contact www.precisionlab.com or call 1-800-323-6280.

Precision Laboratories, based in Northbrook, Illinois is a manufacturer and marketer of value-added specialty chemicals used to improve the performance and playability of turf, by enhancing growing conditions, pesticide efficacy and turfgrass quality. The company's best of class product lines include soil conditioners, adjuvants, additives, spray pattern indicators and permanent turf colorants.
