FOR IMMEDIATE RELEASE

Precision Laboratories Announces Secure™ WDG Research Results

Northbrook, IL, July 28, 2002 – James D. Reiss, Director, Ag Business Unit, Precision Laboratories, today announced that the company has new research showing that Secure WDG is highly effective at enhancing the potato desiccation of Gramoxone® MAX and Reglone® while effectively reducing spray drift.

The study compared the fate of spray droplet distribution and retention of tank mixes containing ordinary nonionic surfactants and commonly used drift control agents. The results indicate that the standard tank mix of non-ionic surfactants plus drift control agents reduce the performance of Gramoxone MAX in desiccating potatoes. In comparison, the Secure WDG plots showed no reduction in desiccation performance and provided superior drift control, thus reducing the applicator's liability risk.

Precision's Secure WDG is a unique combination of non-ionic surfactants and HPG polymer technology that improves spray solution adhesion to and coverage of, leaf surfaces while reducing physical spray drift during application. Secure WDG offers a low-use-rate of 1lb/100 gallons of spray solution and is available in easy-to handle 10 lb. bags.

For more information please contact the Precision Laboratories customer service team by telephone at (800) 323-6280, by e-mail at info@precisionlab.com or by visiting the company's website at www.precisionlab.com.

Precision Laboratories' Ag Business Unit, based in Northbrook, Illinois is a manufacturer and marketer of innovative, value-added agricultural adjuvant technologies. The company's best of class product lines include a wide range of adjuvants, seed coating polymers, colorants, and marking foam technologies.
