Superintendent Feedback Drives Updated Package Size Packaging for Cascade Plus 16G Increases to Treat 6,000 Square Feet

Waukegan, Ill. October 25, 2007 – Precision Laboratories, Inc. announced that packaging for the Cascade Plus 16G granular soil surfactant will increase to a 42 pound bag size. The increased package size will now treat a 6,000 – 12,000 square foot area, making it more user-friendly for busy superintendents.

Cascade Plus 16G is used to prevent Localized Dry Spot and correct hydrophobic soil conditions. “The granular formula is used by those superintendents who prefer the flexibility of the spreader application,” explained Don Spier, vice president of turf and ornamentals at Precision Laboratories. “We increased the bag to treat 6,000 – 12,000 square feet, which is easier to calculate for appropriate use rates.”

In addition to its new size, the product logo and package design for the granular surfactant have been updated to reflect the combined branding efforts for the Precision Zone Surfactants.
