

TRIPLO™

HYDRATION & INFILTRATION

Golf course superintendents obsess about the playing conditions they provide. Managing water across multiple acres, is an important part of what turf grass managers do. TRIPLO™ is a unique combination of surfactants designed to increase the movement of irrigation and rainwater into and throughout the root zone of natural turf playing surfaces at an affordable price.

WHAT MAKES TRIPLO BETTER:

- Improves the infiltration of rainfall and irrigation into playing surfaces
- Increases available water in the root zone for three to four weeks
- Does not require irrigation immediately after application
- Economical enough to allow multiple applications to large areas, such as golf course fairways

FEATURES AND BENEFITS:

- Flexible formulation
- Conserves water by reducing surface tension and run-off
- Increases plant health by providing more plant-available water

USE RATES

- Apply 110 – 220 ounces (3.25 – 6.5 Liters) of TRIPLO per acre (.40 h) in sufficient water volume to ensure coverage
- Apply 2.5 – 5 ounces (74 – 148 ml) of TRIPLO per 1,000 sq. ft. (92.9 m²) in sufficient water volume to ensure coverage

APPLICATION INTERVAL

- Apply TRIPLO every 14 to 28 days

PACKAGING

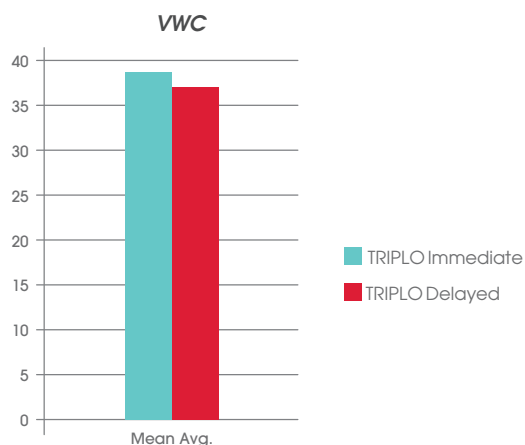

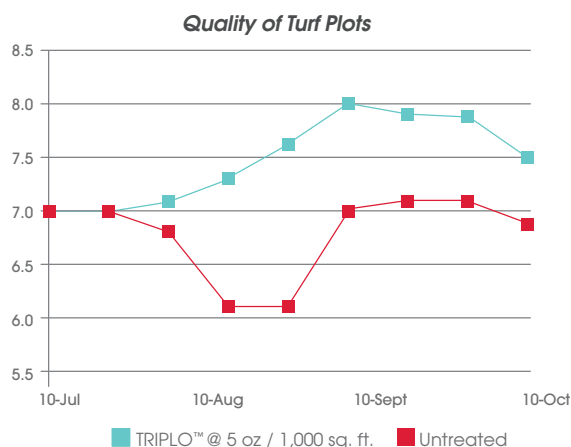

- 2 x 2.5 gallons per case (Product No. 156-25)
- 20 gallon drum (Product No. 156-20)

TRIPLO™

PERFORMANCE DATA

PLANT QUALITY & HEALTH

Healthy turfgrass is more aesthetically pleasing to players and customers. The quality of turf plots treated with TRIPLO at Purdue University was superior to that of the quality of untreated plots.

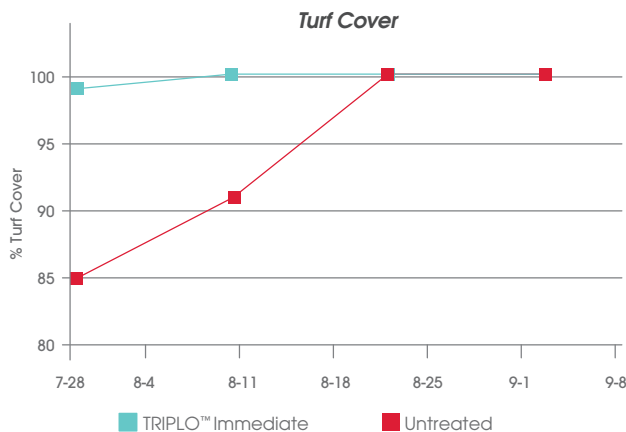

POST-APPLICATION IRRIGATION

The performance of some products can be negatively affected by delayed irrigation after application. Research conducted in Utah shows that delayed irrigation did not affect the volumetric water content of soils treated with TRIPLO.

TURF COVER

Localized dry spot reduces turfgrass cover and negatively affects the aesthetics and playability of turf surfaces. TRIPLO treatments on turfgrass in Utah had superior cover compared to the untreated control.
