## ACTIVATOR ADJUVANT WITH TURF PIGMENT

## ENHANCE YOUR PGR PERFORMANCE WITH ACTIVO™

Plant growth regulators (PGRs) are widely used for improving turf quality, playability and reducing labor inputs. For these reasons, today's turfgrass managers need to maximize the duration and effectiveness of PGR programs.

At the University of Georgia, **Activo™** was combined with three popular PGRs and applied every 4 weeks to fairway height *Latitude 36* hybrid bermudagrass. The study showed that **Activo™**:

- Extends PGR duration from 3 to 4 weeks during the summer months.
- Maximizes PGR effect on clipping reduction for less mowing labor and equipment wear.
- Increases visual turfgrass appearance with our natural green pigment, **Envy™**.
- Improved PGR efficacy, to maximize your ROI.
