

DELIVER™

NONIONIC SURFACTANT PLUS AMS PREMIX FOR GLYPHOSATE

DELIVER™ is an easy to use, corn-based, nonionic surfactant plus ammonium sulfate premix specifically formulated for use with unloaded glyphosate formulations.

DELIVER FACTS

Provides 2 quarts of nonionic surfactant at 2.5% v/v use rate.

Provides 8.5 lbs. of actual dry ammonium sulfate equivalent to tie-up hard water ions and improve uptake by hard to control nitrogen-responsive weed species.

Products delivering lower levels of AMS than 8.5 lb. provide lower levels of performance.

Provides significantly higher levels of ammonium ions than AMS imitators.

Prevents hard water ions from reducing glyphosate performance.

DELIVER BENEFITS

Reduces performance complaints.

- More consistent control over a wider range of hard-to-control weed species.
- Increases herbicide performance in cool weather or drought conditions.

Liquid formulation saves time.

- Faster fill-ups than dumping bags of AMS.
- No additional surfactant or defoamer needed.

Easy to use and handle, liquid formulation.

- Mixes easily, even in hard and cold water.
- Won't plug nozzles.
- Antifoam system prevents foaming problems.
- Simple 2.5% v/v use rate.

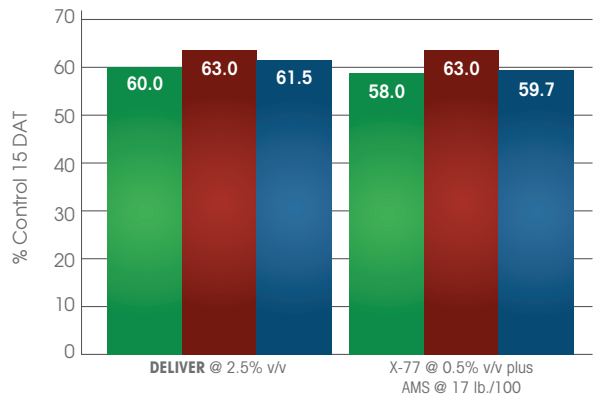

DELIVER

Needs no additional surfactant when used with generic glyphosate formulations.

Is a great recommendation anytime herbicides require AMS and nonionic surfactant.

Is better than ammonium sulfate "imitators" when stressful growing conditions exist.

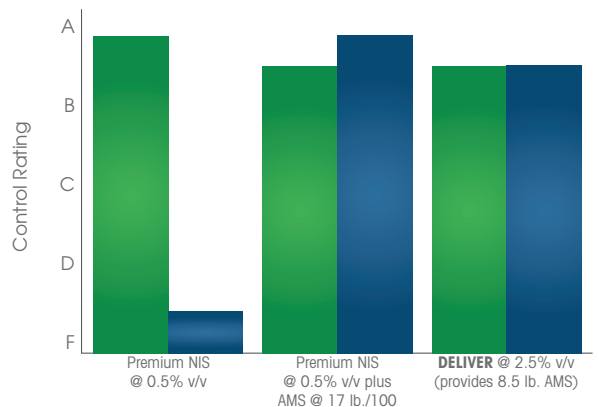

DELIVER PERFORMANCE WITH ROUNDUP ORIGINAL

■ Volunteer Wheat (LSD = 16)
■ Wild Buckwheat (LSD = 16)
■ Composit Control (LSD = 16)

1995 University Data.
Roundup applied at 12 oz./acre + 2,4-D ester at 8 oz./acre + Clarity at 4 oz./acre.
All treatments applied in hard water.

MONSANTO GREENHOUSE ROUNDUP ADDITIVES

■ Soft Water (<200 ppm)
■ Hard water (1,500 ppm)

1995 Monsanto Greenhouse Ratings.
Barnyard grass and velvetleaf control composite ratings.
2.5 qts. Lasso Micro-Tech per 20 gal. water used to simulate hard water conditions.
