

INCIDE-OUT™

Spray Tank Cleaner

INCIDE-OUT is a powerful, concentrated liquid tank cleaner formulated to penetrate, resolubilize and hold pesticide residues in the rinsate solution until they are purged from the liquid system. Its unique formulation makes it the product of choice for low water volume cleanouts. INCIDE-OUT is recognized as an approved spray tank cleaner by both Syngenta and DuPont.

Tank Cleaning Facts

No tank cleaner can effectively neutralize all pesticide residues.

Ordinary tank cleaners and ammonia work by elevating the rinse water pH to high levels as a way to improve pesticide solubility.

American Cyanamid recognized that ammonia alone was not enough for effective tank cleaning and published a Pursuit Information Bulletin to that effect in 1990.

Technique is as important as the tank cleaner technology used. Make sure that the entire inside of the tank is contacted by rinse solution. Additionally, completely purge the system by draining all lines, sumps, strainers and the pump during the final clean water rinse.

Many tank clean-out problems start with adjuvant selection. Avoid using cheap crop oils that can leave slimy film build-ups inside the spray tank.

INCIDE-OUT Benefits

Specifically formulated for low water volume cleanouts.

Superior tank clean-out capability.

- Elevates rinsate solution to higher pH levels than ammonia and ordinary tank cleaners for superior penetration of dried-on residues and accelerated breakdown of certain pesticides.
- Contains detergents and emulsifiers to cut through oily residues more effectively.

Superior rinse-out characteristics.

- Contains antiredeposition aids to hold residues in solution for more thorough rinsing.

Won't plug nozzles.

- No undissolved grit like dry tank cleaners.

Safe to apply as rinsate to growing crops.

- 40 CFR approved ingredients.
- No restrictions like some tank cleaners.

Easy on equipment, noncorrosive formulation.

- Contains corrosion inhibitors to protect equipment.

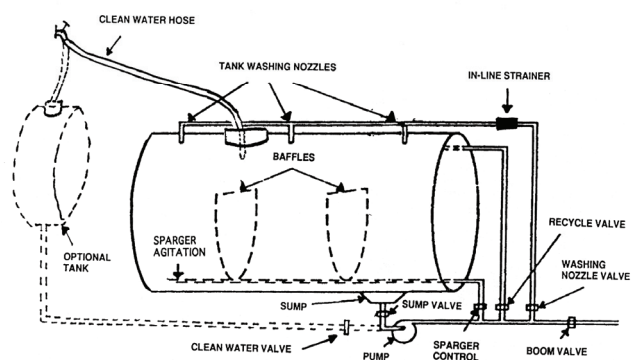

Concentrated, low-use-rate formula cost less to use.

- 0.25% v/v compared to 1% v/v for other liquids or 1 lb. for dry products.

Safer to use than dry tank cleaners.

- No dust to be accidentally inhaled.
