

LIQUID OVERSEED PROGRAM

WITH ENVY™ + BORDER™ 2.0

THE DESIRE FOR GREEN

Every year, golfers head south in search of green playing surfaces. Overseeding bermudagrass with a cool season turf provides golfers with green turf, but at a cost. Traditional overseeding interrupts play, increases seed and chemical costs, increases water usage and makes the spring transition to bermudagrass a challenge. Precision Laboratories' liquid overseed program with ENVY and BORDER 2.0, provides golfers with the green playing surfaces they want while golf course superintendents avoid the cost and labor of traditional overseeding.

BENEFITS OF LIQUID VERSUS TRADITIONAL OVERSEEDING

- No disruption of play or revenue
- Lower costs
- Improved spring transition
- Increased sustainability

RATES:

Apply ENVY at 18-22 oz / 50 gal of spray solution per acre (fairway)

Apply BORDER 2.0 at 2-4 pts / 100 gal of spray solution

ENVY is a combination of pigments and spray adjuvants labeled for application to turf, trees or shrubs. ENVY may be used to:

- Improve color
- Mask injury or discoloration
- Improve the coverage of spray droplets on the leaf blade

BORDER 2.0 is a concentrated, liquid adjuvant premix that contains natural polymers, retention aids and surfactants.

- Improve spray droplet adhesion
- Increase spray droplet coverage
- Reduce drift and off-target movement

The images show ENVY alone and ENVY + BORDER 2.0 sprayed over water-sensitive paper with a Toro® 5800 sprayer using TeeJet® AIC11010 nozzles at a spray volume of 50 GPA. Notice the increased deposition and spread of ENVY when paired with BORDER 2.0.

ENVY
ENVY alone at a rate of 20 oz/50 gal of spray solution

ENVY + BORDER 2.0
ENVY at a rate of 20 oz/50 gal of spray solution combined with BORDER 2.0 at 3 pt/100 gal
