Application Methods:

Sequential Process: Pesticides and biologicals are applied from separate slurry tanks and applied to seed utilizing two passes thru the seed treating equipment.

Simultaneous Process: Pesticides and biologicals are maintained in separate slurry tanks and applied to seed at separate points in a single pass thru the seed treating equipment.

Slurry Process: Pesticides and biologicals may be combined into a single slurry tank for a maximum of 4 hours. ProSurge and Forza may be combined into a single slurry tank with pesticides for a maximum of 48 hours.
