### What if you could . . .

Increase sugar content?

Increase berry firmness?

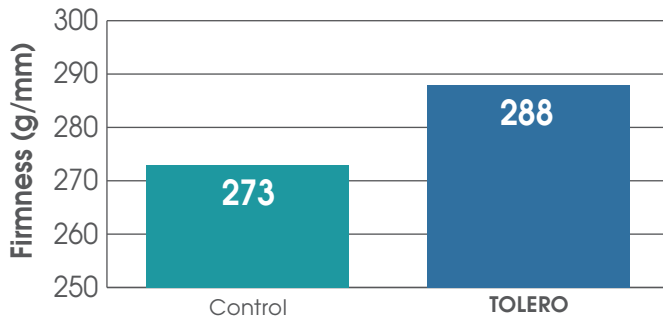

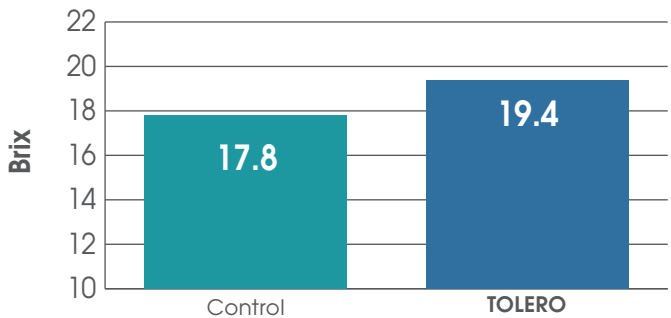

Increase berry weight?

9%

Increased sugar content with TOLERO

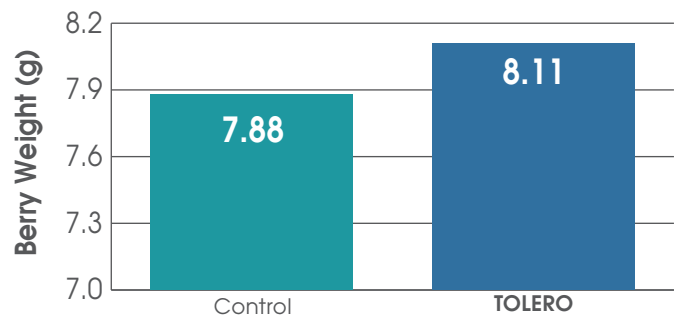

5.5%

Increased berry firmness with TOLERO

2.9%

Increased berry weight with TOLERO

Research was conducted in the same vineyard over a two season period by Dr. Ashraf El-kereamy, University of California Cooperative Extension, on Scarlet Royal table grapes grown on a sandy loam soil during hot, dry conditions. TOLERO was injected through drip irrigation at an initial rate of 1 quart per acre, followed by subsequent injections at 1 pint per acre. TOLERO was injected in three-week intervals for a total of six applications.
