

BORDER™ XTRA 8L

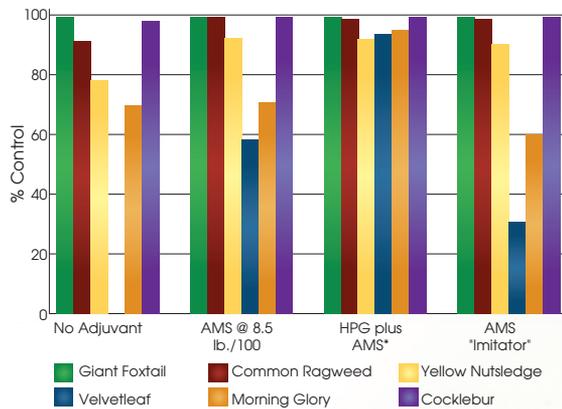

STOP DRIFT AND MAXIMIZE PERFORMANCE

BORDER™ XTRA 8L is a patented, liquid ammonium sulfate plus HPG polymer-based activator adjuvant premix which optimizes herbicide performance on a wider range of weed species by maximizing spray solution retention and coverage on target leaf surfaces while providing higher levels of AMS needed for superior weed control under weather-stress conditions.

HPG polymer technology has also been proven to provide superior drift reduction performance.

ADJUVANT PERFORMANCE WITH ROUNDUP ULTRA®

28 DAT Ultra @ .5 lb./ac. 1998 University Research.

*HPG plus AMS rates are similar to those found in the 18 lb./100 use rate of Border Xtra DF.

BORDER XTRA 8L FACTS

Provides 8.5 lbs of actual ammonium sulfate to tie-up hard water ions and maximize uptake by hard-to-control Nitrogen responsive weed species.

Increases herbicide performance in cool weather or drought conditions.

Protects other crops from drift better than ordinary drift retardants.

BORDER XTRA 8L BENEFITS

Reduces applicator risk and liability by providing superior drift control.

Reduces performance complaints.

- Keeps more spray solution on the leaf surface for better herbicide performance in weather-stress conditions.
- More consistent control over a wider range of hard-to-control weed species.

Easy to use and handle, liquid formulation.

- Mixes easily, even in hard and cold water.
- Won't plug nozzles like ordinary drift retardants.
- Antifoam system prevents foaming problems.
- Simple 2.5% v/v use rate.

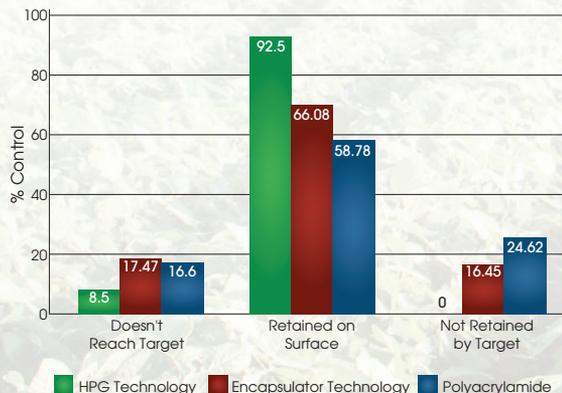

BORDER XTRA 8L...

Is Roundup UltraMAX® or WeatherMAX® compatible.

Needs no additional surfactant when used with generic Glyphosate formulations.

A great recommendation anytime herbicides require AMS and drift control is concern.
