

RIPARA™

HIGH SURFACTANT MODIFIED VEGETABLE OIL CONCENTRATE, DEPOSITION AID AND DRIFT RETARDANT

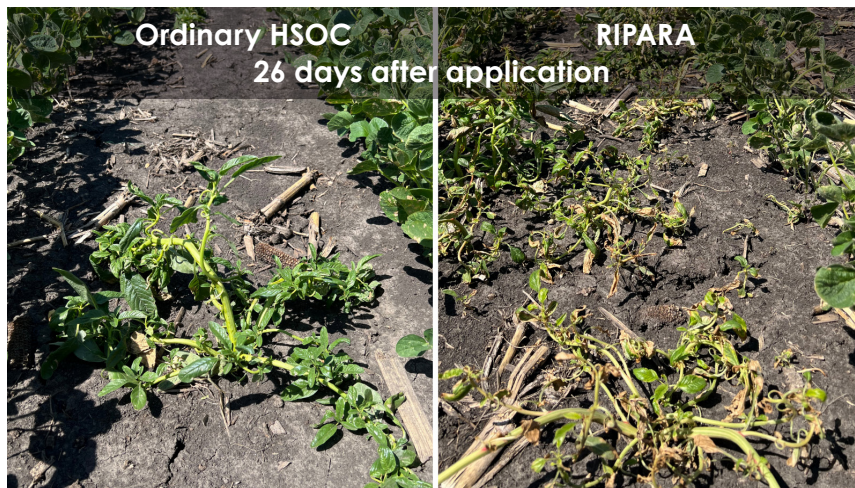

WATERHEMP CONTROL

Waterhemp can grow 1-1.25 inch per day and can be a tough weed to control if not sprayed at 4 inches or less. Waterhemp can compete with crops season-long and has been known to reduce soybean yields by as much as 45% if 20 plants per square foot are present. Waterhemp can also compete early season in corn. By the time weeds are 6 inches tall, corn yield can be reduced up to 15%. RIPARA™ is a great tank mix partner with corn and soybean herbicides and provides superior efficacy and better coverage when compared to an ordinary COC and MSO.

When compared to an ordinary MSO, RIPARA provided superior efficacy and better coverage for a more complete and faster weed kill.

Plants in above images were treated with Impact® (1.0 oz/A), Atrazine (0.5 lbs/A), and AMS (2.5 lbs/A) with and without RIPARA.

Plants in above images were treated with Enlist One® (32 oz/acre), EverpreX® (16 oz/acre), Clethodim (12 oz/acre), AMS (2lbs/acre) with and without RIPARA.
