

TRANSPORT PLUS™

LOW-USE RATE ADJUVANT FOR GLYPHOSATE

Transport Plus is a convenient, low-use rate, activator adjuvant premix that combines water conditioning agents, drift retardants, ammonium ions and anti-foam in an easy-to-use formulation.

Transport Plus sequesters antagonistic hard water ions, provides additional ammonium ions for improved herbicide uptake and reduces drift risk to ensure optimum performance of glyphosate-based herbicides.

TRANSPORT PLUS FACTS

- Improves spray solution water quality by tying up more hard water ions than ammonium sulfate.
- Provides ammonium ions for improved uptake by hard-to-control, nitrogen responsive weed species, like velvetleaf.
- Increases herbicide performance in cool weather or drought conditions.
- Reduces drift risk to other crops.

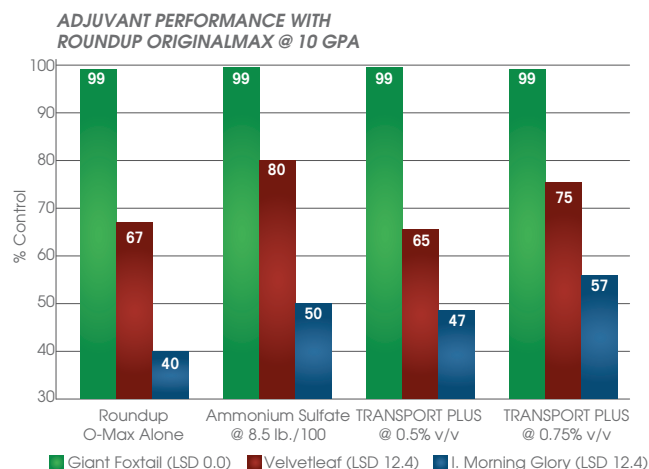

TRANSPORT PLUS IS IDEAL...

- For growers who don't want the hassle of dumping bags of ammonium sulfate or large volume liquid adjuvants.
- For applicators who want to spend more time spraying and less time mixing.
- For use with generic glyphosate formulations and Roundup OriginalMax®.

*Roundup OriginalMax is a registered trademark of Monsanto.

TRANSPORT PLUS BENEFITS

- Economical option to tank mixing AMS and drift control products.
- Convenient, low-use-rates of 1–4 quarts per 100 gallons takes up less space than dry or large volume liquid products.
- Easy to mix and handle liquid formulations.
- University research has shown that Transport Plus is a good substitute for ammonium sulfate, when used with glyphosate, on many hard-to-control weed species.
