

WANT HIGHER YIELDS?

DOMINO™ FOR SUGAR BEETS

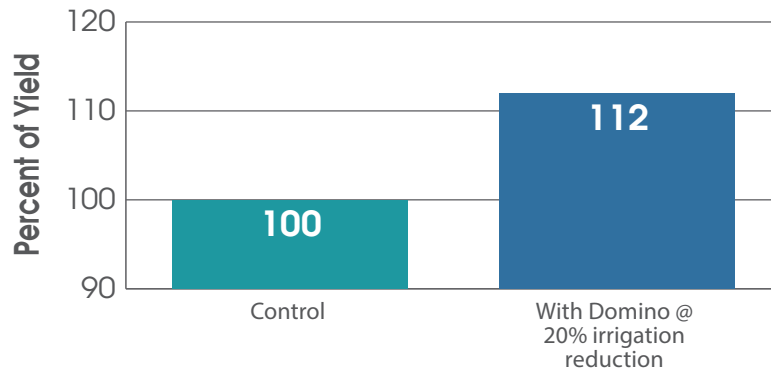

What if you could . . .

Increase sugar beet yield?

12%

Higher sugar beet yields while using less water with DOMINO

20%

Reduction in water use with DOMINO

DOMINO improves the grower's return on invested inputs. This includes a reduction in water requirements, which results in less fuel or electricity for irrigation pumps as well as environmental benefits of reduced water consumption. Growers can reduce the use of irrigation water with DOMINO by decreasing irrigation times or increasing time between watering.

Trials were conducted by Dr. Howard Neibling at The University of Idaho. All crops were grown in silt loam soils. Plots were treated with Domino through an irrigation system. Initial treatment was 1 quart per acre, followed by 3 applications at 1 pint per acre every 30 days. Domino is a trademark of Precision Laboratories, LLC
